

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

Claim 1 (original): A sheet material comprising a plurality of folds defining at least four segments, the sheet material being foldable and unfoldable about said folds, the sheet material comprising first and second securement means, arranged in use to cooperate to releasably secure the sheet material in the folded configuration when folded, and wherein the securement means are located such that the sheet material is foldable to a partially folded configuration comprising three columns of segments in a single row in which the first securement means is located on one outer column and the second securement means is located on the other outer column.

Claim 2 (original): A sheet material comprising folds defining at least four segments arranged in at least three columns, the sheet material being foldable and unfoldable about said folds, the sheet material further comprising first and second securement means, arranged, in use, to cooperate to releasably secure the sheet material in the folded configuration when folded, the first and second securement means being located on separate columns spaced apart by one column.

Claim 3 (original): A sheet material as claimed in Claim 1 or 2 wherein the folds preferably comprise a first set of parallel folds.

Claims 4 - 19 (canceled).

Claim 20 (original): A method of providing a folded sheet material to a surface, the method comprising the steps of:

- a) providing a surface;
- b) providing a sheet material of the first aspect of the invention; and
- c) in any order, securing the sheet material in a folded configuration and locating the sheet material on the surface.

Claim 21 (original): A method as claimed in Claim 20 wherein step (c) comprises securing the sheet material in the folded configuration and then locating the secured sheet material on the surface.

Claim 22 (original): A method as claimed in Claim 20 or 21 wherein step (c) comprises connecting the sheet material to the surface.

Claims 23 - 24 (canceled).

Claim 25 (original): A sheet material comprising an envelope portion comprising a pocket and a pocket closure flap; and a sheet portion comprising a first set of folds defining a plurality of segments, detachably connected to the pocket closure flap.

Claim 26 (original): A sheet material as claimed in Claim 25 wherein the first set of folds is a first set of concertina folds.

Claim 27 (original): A sheet material as claimed in Claim 25 or 26 wherein the sheet portion is integrally formed with the envelope portion.

Claims 28 - 31 (canceled).

Claim 32 (original): A sheet material comprising a first set of parallel folds, defining a plurality of segments, about which folds the sheet material can be unfolded and folded, the first set of folds comprising at least two concertina folds, a plurality of the segments being foldable about said concertina folds to form a stack, and wherein the sheet material comprises at least one segment which, in use, is foldable over the folded stack to form a cover portion thereon.

Claim 33 (original): A sheet material as claimed in Claim 32 wherein the segment or segments comprising the cover portion effect provision of a solid spine extending substantially along the side of the stack of segments, when the cover portion is folded over the stack, in use.

Claims 34 - 35 (canceled).

Claim 36 (original): A sheet material comprising a first set of concertina folds defining a plurality of segments, the sheet material being foldable about the folds to form a stack of segments, and wherein the folds are positioned such that when the segments are folded into a stack, a plurality of the segments present a marginal portion.

Claim 37 (original): A sheet material as claimed in Claim 36 comprising a first set of concertina folds defining a row of segments, wherein the folds are positioned such that an outermost segment of the row has a first size and a plurality of subsequent segments have a width or length larger than the previous largest upstream segment in a row of segments.

Claims 38 - 40 (canceled).

Claim 41 (original): A sheet article comprising a cover and at least two sheet materials fixedly connected to the cover, wherein at least one of the sheet materials comprises concertina folds, and wherein the cover comprises at least a first portion and a second

portion arranged in use to enable sandwiching of at least one of the sheet materials between said portions.

Claim 42 (original): A sheet article as claimed in Claim 41 wherein the sheet materials are connected to different surfaces of the cover.

Claims 43 - 58 (canceled).

Claim 59 (original): A sheet article comprising a cover to which is connected a sheet material comprising concertina folds, the sheet material being foldable and unfoldable about said folds, wherein the cover comprises a first portion and a second portion arranged to enable sandwiching of the folded sheet material between said portions, and wherein the cover further comprises a handle portion protruding from the cover.

Claim 60 (original): A sheet article as claimed in Claim 59 wherein the first and second portions are rotatably connected.

Claims 61 - 66 (canceled).
